Easily track the status of your audits from the Engagement dashboard

Confidently complete audits faster from a single solution with intuitive workflows that guide you every step of the way

Help ensure your audits comply with current U.K. audit standards with a broad range of audit content and a familiar process

Securely access your audit online from anywhere with a cloud-based solution that updates your data and stakeholders in real time

Manage your online confirmation process securely using Thomson Reuters® Confirmation — all within the same platform

Complete your audit engagements efficiently and in compliance with the latest audit standards

Cloud Audit Suite is comprised of two core cloud-based solutions:

- 1 Comprehensive audit workflow management hub with full trial balance capabilities, workpaper management, and seamless integration with up-to-date audit methodology. Easily communicate relevant information to clients and view the progress of the audit overall.
- 2 Automated audit process to manage the most common types of audit engagements. With tailorable templates and detailed assistance when it's needed, you can gain confidence in the process, increase efficiency, and deliver more value-add audits.

Everything you need in one place

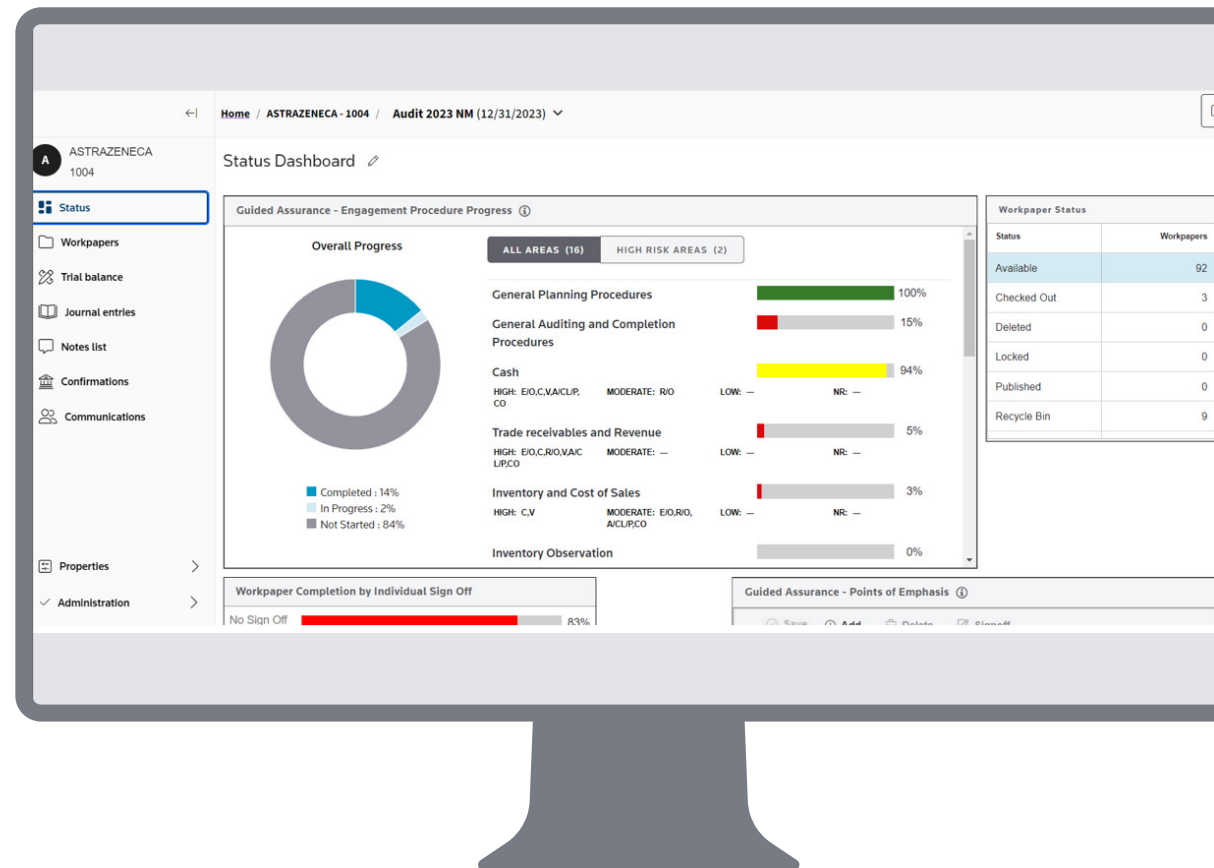

Cloud Audit Suite is designed to work seamlessly while increasing accuracy and simplifying your audit process from start-to-finish.

Access your engagements

View your audit engagements at a glance with the options to add, view, and edit from the left section. Take advantage of the feature to roll forward an existing template for this year's engagement. If you prefer, you can even download the entire engagement to PDF.

Track the status

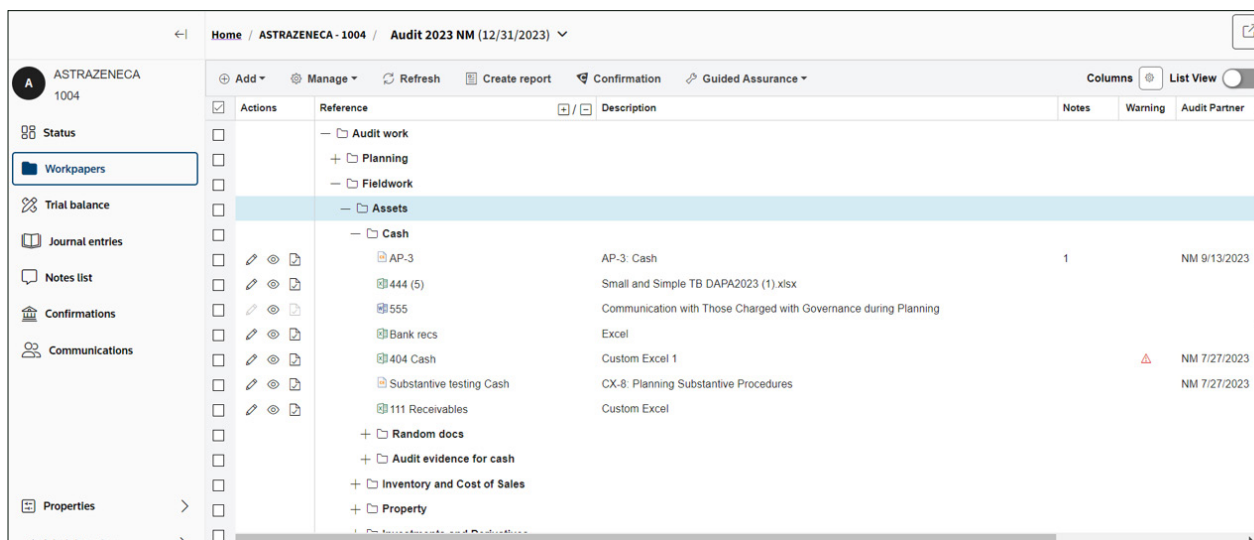

Monitor the progress of the audit engagements, showing sections that have already been signed off. Customise your experience to fit your needs by adding or removing widgets.

Leverage your workpapers and template

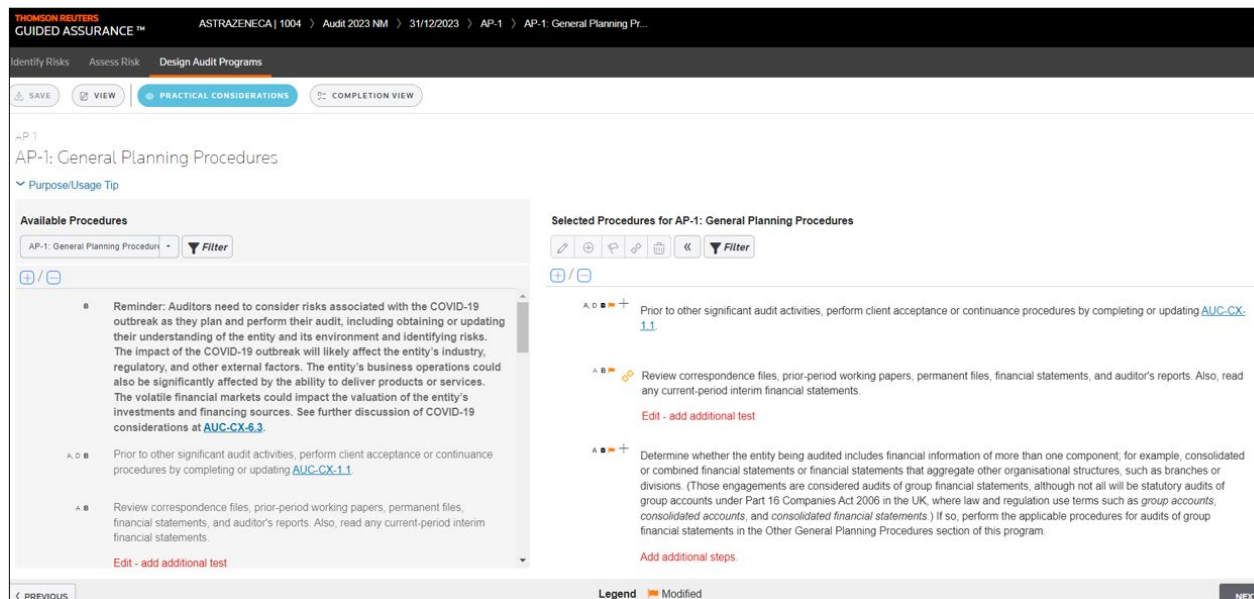

Coordinate all your audit methodology templates and workpapers into meaningful sections. The audit templates help you when planning the audit: risk assessment, determining materiality thresholds, and substantive procedures. Plus, get step-by-step assistance when concluding and finalising the audit engagements.

The audit templates can be tailored specifically for the type of organisation being audited and then rolled forward for the next year's audit, saving you time. Simply drag and drop your lead schedules, audit evidence, and other working papers into the software to store for reference.

Create your audit plan

Tailor your audit plan with pre-populated procedures based on the risk assessment. Simply drag and drop snippets from the working section (left) to your desired audit plan (right). Further customise your working audit plan in multiple ways, including the ability to add and edit words of the procedures. Then save as a template to roll forward to the next year.

Manage trial balances

Import all trial balance information from a Microsoft® Excel file with the option to tailor your view to the way you want it. Create your own lead schedules and save time by pulling them into all your other engagements. Quickly pull through all the figures from the trial balance by using the “recalculate” function.

Document journal entries

Import your journal entries which then automatically feed into all relevant workpapers, lead schedules, and trial balances to easily notice them. Both Microsoft Excel and Word integrate with Cloud Audit Suite so you can use them to automatically pull the Trial Balance numbers into customisable lead schedules.

Tailor the columns to suit your preference and automatically recalculate desired variances. Easily compare the current year to the prior year. You can also insert workpaper reference numbers which work as links to the relevant documents.
