

ONESOURCE Import Management

ONESOURCE Import Management allows companies to manage the entire import process from the point of shipment to the final submission of the customs declaration.

The challenge

Given the global nature of businesses and the constant change in regulatory requirements, companies need to align their import processes to facilitate the flow of information across a global supply chain. This includes ensuring that accurate and timely trade data is submitted upon export and prior to import to facilitate expedited customs clearance and final delivery to your facility.

As supply chains grow in volume and complexity, this process becomes increasingly difficult to manage, especially when executed in a manual fashion.

The solution

ONESOURCE® Import Management replaces the manual and time-consuming import process with a robust, on-demand solution designed to facilitate the flow of import/export information across a global supply chain in real time.

By utilising ONESOURCE Import Management, companies have reliable means for the exchange of trade data required for the importation of goods into any country around the world. From purchase order to final delivery, our import software presents companies with a complete end-to-end visibility tool, including the ability to facilitate exports electronically out of one country while preparing the import data for importation into another country.

The benefits

ONESOURCE Import Management provides a complete, automated system for consolidating the necessary information for import filing — validating it against regulatory content and providing accurate and timely data to all partners within the supply chain.

Feature	Activity
Customs clearance	Avoid customs clearance delays with validated and compliant import shipment data
Direct filing	Seamlessly connect with customs authorities around the world
ERP integration	Eliminate duplicate data entry by integrating with your ERP systems
Data quality	Reduce the need to re-key commercial information from various sources (invoices, ASN, PO, etc.)
Improved communication	Prepare import and export documentation on one platform and share it across the supply chain, while also tracking and maintaining broker communication
Global trade content	Leverage up-to-date regulatory information from 210+ countries and territories to validate the accuracy of all data before submitting the declaration
Recordkeeping	Hold all import-related documents in one location to ensure recordkeeping regulations are met

ONESOURCE Entry Verification

With ONESOURCE Entry Verification, you can implement a comprehensive post-entry review process. The software provides importers with an integrated platform designed to compare declaration data and identify errors, correct discrepancies, and communicate issues to the customs broker if needed. The improved visibility into your declaration data will greatly reduce the need for formal corrections to be submitted to customs.

Thrive globally. Compete confidently with ONESOURCE Global Trade Solutions.
